## TECH WEST'S NEW AMALGAM Separator

The ECO-Star® Amalgam Separator boasts a high containment capacity for extended service and pump life, cutting-edge cyclonic design with rapid velocity and waste capture. There are less parts, reducing potential leak and failure points and a fully molded design offering a clear view of the system in action. With ISO 11143:2008 certification by NSF, meeting Best Management Practices (BMPs), and over 99% removal, ECO-Star's® high efficiency cyclonic vacuum filtration solution leads the way in advanced vacuum filtration while also complying with the rigid amalgam separation requirement

The amalgam separator has four different mounting options that make installation fast and easy. Cartridge replacements can be ordered through a Tech West, Inc. approved distributor or supplier. Please contact your local distributor or supplier for ordering information.
