

Optimal System Configurations using Advanced DigitalKELKOM

HARD-WIRED PANEL WORK CENTERS

Because the work in these areas is not centered on the PC, a wired panel is more effective because it's where you can see it while working.

- Wired panels are ideal for all aerosol environments where quick screen clean wipe-and-go room turns are the norm.
- Advanced panels offer individual ring/alert tones to alert specific individuals.

"Communication in a glance across the room (SM)"

Ops / Lab / Sterile / team lounge / recovery

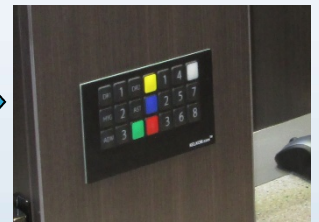

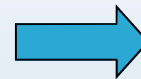

You see, hear and understand the message even while you work!

Just because you have a PC screen "everywhere" does not mean it should be used for real-time workflow communication.

With our experiences from thousands of practices, we can recommend the optimal panel type for each location in your office.

This is based on the type of work performed in each location – Ops are different than the Doctor's office or Reception because the work performed in each differs.

The DigitalKELKOM™ platform allows you the ultimate flexibility creating **YOUR** communication system.

Customize the communication features to drive patient flow. We'll help you choose the best devices to deliver communication appropriately for your specific work areas.

OFFICE PC WORK CENTERS

These work centers focus on the PC which now becomes appropriate to display a Virtual Kelkom panel!

- We recommend the PC panel or Advanced touch screen panels at these locations.
- Easily send messages in less than 1 second.

Our well-behaved Kelkom Panel Application running in the background lets you get your usual desktop computer work done – - scheduling, check-in, billing, consults, and reading clinicals **and still stay in touch with real-time office demands.**
