

IMPORTANT

PLEASE READ THESE INSTRUCTIONS BEFORE USING THE SCANX

The ScanX is equipped with a USB interface. It will only operate properly when connected to a computer with a USB 1.1, USB 2.0, or later interface that is running Windows® 2000 or Windows® XP with the latest Service Pack and device drivers available from Microsoft®:

Windows® 2000: Service Pack 4 or later is required. With Service Pack 4, some computers may also require the May 13, 2003 USB Device Driver update available from the Microsoft® web site by searching for KB820759 and then following the download and installation instructions.

Windows® XP: Service Pack 1a or later is required. With Service Pack 1a, some computers may also require the July 3, 2003, USB Device Driver update available from the Microsoft® web site by searching for KB822603 and then following the download and installation instructions.

Before connecting the ScanX to your computer or attempting to use it for the first time, please run the **Setup** program on the ScanX *Drivers and Utilities Disk* included with the ScanX. Normally, this program will run automatically when you put the CD into the drive for the first time. If not, please run the **Setup** program located in the root directory of the CD (typically D:\Setup.exe).

The **Setup** program will ask you to connect the USB cable between the computer and ScanX and **turn the ScanX on**. A few moments after you do so, Windows® will detect the ScanX as a new USB Device and the **Found New Hardware Wizard** will appear. Windows® should automatically find the drivers on the ScanX *Drivers and Utilities Disk* included with the ScanX. After you complete the wizard, it will appear a second time. After you complete it the second time, it will appear a third, and final time. This wizard may also appear each time you plug the ScanX into a different USB port on your computer.

After completing the **Found New Hardware Wizard** three times, the **Setup** program will report that the drivers have been properly loaded. The **Setup** program will also guide you through updating the library files on your computer, which must be completed before the ScanX will operate properly. More information can be found in the **Installation Instructions and Notes** file on the ScanX *Drivers and Utilities Disk* included with the ScanX.
